

Cold-chain packaging service using *va-Q-one 43* to be offered for pharma air cargo at KIX

Kansai Airports today announced that cold-chain packaging service using *va-Q-one 43* will be available for air transport of pharmaceutical goods at Kansai International Airport (KIX), beginning November 1, 2019.

Having become the first Japanese airport to be equipped with a temperature-controlled pharmaceutical storage facility (KIX-Medica) in October 2010, KIX provides a secure temperature-controlled environment for storing pharma products.

va-Q-one 43, the cold-chain packaging solution of insulation specialist va-Q-tec, will be introduced by CKTS, a ground handling company of Kansai Airports Group. Packaging pharmaceuticals with *va-Q-one 43* will help extend temperature hold time both inside and outside the warehouse, thereby contributing to safer air transport of pharma items.

Kansai Airports Group is committed to actively introducing state-of-art technology and services to create a comfortable and convenient environment for all airport users.
